Research, Scholarship and Creative Projects on Display at FAU Libraries through May 2

Fifteen projects that represent the research, scholarship and creative efforts of Florida Atlantic University’s undergraduate students will be featured through Friday, May 2 at FAU Libraries. The display, curated by the Office of Undergraduate Research and Inquiry (OURI), will be at the Davie campus library, where it will run from Monday, Feb. 17 through March 28. The display then will travel to the MacArthur Campus library on FAU’s Jupiter campus on March 31 and remain there until May 2.

The projects, completed either in class or as independent research, were submitted by students in the College of Education, the Christine E. Lynn College of Nursing, the College of Engineering and Computer Science, the Dorothy F. Schmidt College of Arts and Letter, FAU High School and other divisions on campus.

Dual enrollment students at the FAU High School submitted two projects, including a model of a flex-fuel electric car that they are designing for competition. A model of a total hybrid power plant by students in the College of Engineering and Computer Sciences; “Among the Hidden Vocabulary Game,” an educational game that looks like a house; visual design manuals, architecture designs, small poster and other models round are among the other displayed projects.

The OURI was developed to support FAU’s Quality Enhancement Plan (QEP). The primary goal of FAU’s QEP is to integrate and expand a culture of research, inquiry and creative activity into programs through curricular, co-curricular and honors initiatives. Through this initiative, OURI assists faculty and students on how to get funded, published, recognized and involved in undergraduate research and inquiry.
